Quantity Calculation – Curved Metal Fabrication

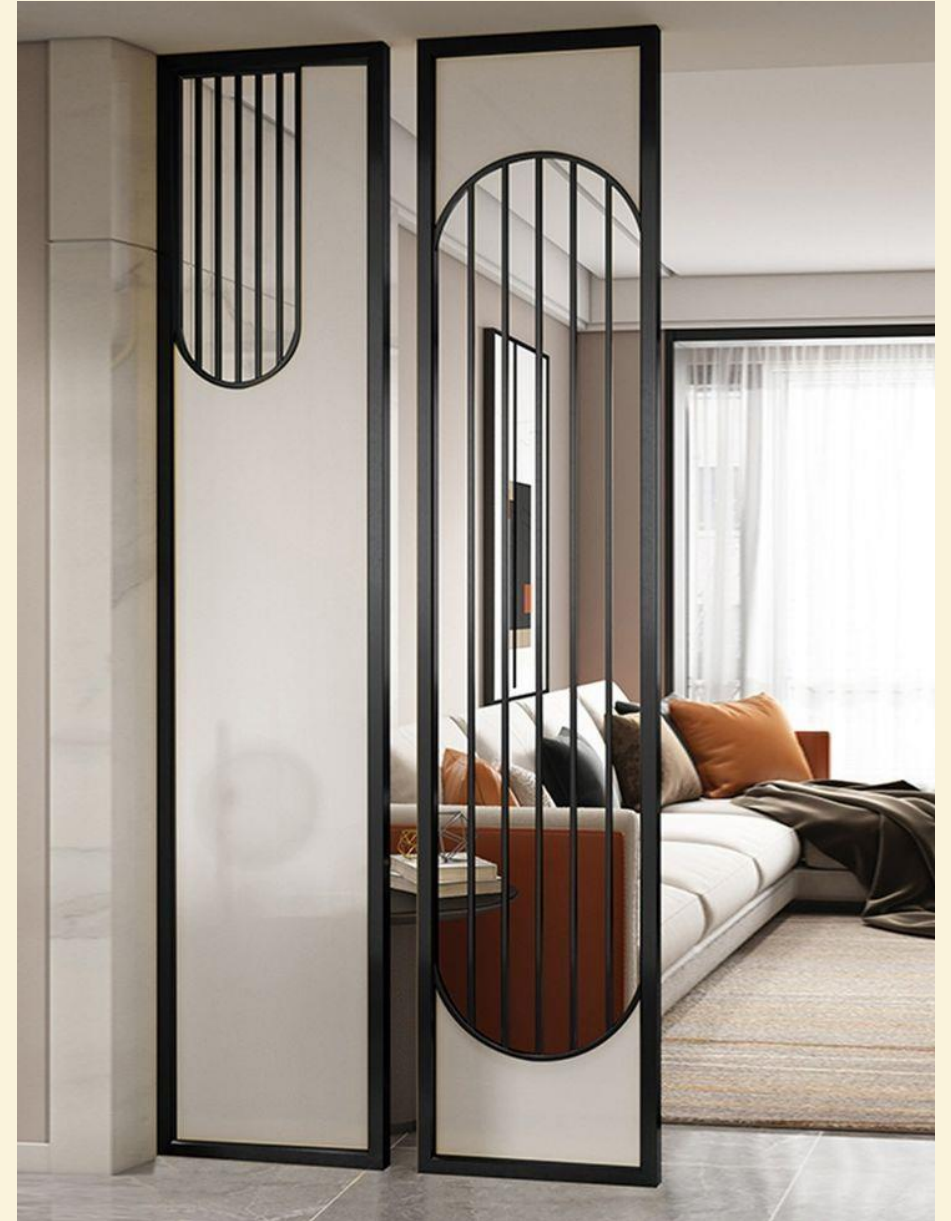

For curved metal elements, quantity is **not calculated based on length or size**. It follows a **standard counting method**:

- **Single Curve / Arch** → Quantity = 1
- **Full Circle** → Quantity = 2

This rule applies **regardless of diameter, radius, or total running length** of the metal.

Important Notes:

- Do **not** calculate in rft (running feet) for curved elements.
- Focus only on the **type of curve**, not its dimensions.
